

# WPD (WordPress in Docker) v1.13 2025-02-15

## WP is an open source web content management system

Run WP, MariaDB and phpMyAdmin (optional) as Docker containers using only: **Makefile**, **.env** and **docker-compose.yml**.

Alternative docker-compose examples and other demo files are enclosed.

## Extras

- can run `cmd_extras.sh` after the installation inside the container (adding extra modules?)
- can run `install_extras.sh` after the installation outside (starting daemons?)
- available **temporary static web** (optional) containers during *suspend*, *backup* and *restore* operations (for users or monitoring services)
- available **wp** binary with **shell completion**, **bash aliases** and some *PHP ini setup*

## Usage

Run `make` to see the help.

## Examples

- `make purge install` - purge everything and fresh install
- `make backup test` - make backup and test
- `make purge restore` - purge everything and restore from backup
- `make logs` - show logs
- `make test` - test containers
